That is correct, that is why we are not interested in painting them. We had thought that slowly changing over as replacements came or starting in the triangle with a different color might work, but we are letting that go since the board wasn't open to that discussion...but would like at least not to have the cigarette moats.

Thanks for your help and research.

I asked Brandon about our decorative trash receptacle paint and his response was that it is baked-on powder coat, which is why it looks so good for so long. Here it is for your info...

As far as the powder coat goes, yes it is baked on. It is applied at a 7-15 mil thickness, but is usually closer to 15. We have to put 7 in there, as it's hand applied and not always 15 mils thick (some of our direct competitors brag about a 4 mil thick coat, if that gives you any idea how thick ours is). It's a super durable marine grade powder that we use, as well. That means that it is meant to hold up well against water and it doubles the time it takes for the color to fade compared to a standard powder coat (that's the "super durable" part).

Does that answer any questions?

I will let you know as the overnight is sent. We will initiate this order.

Question: is the paint used on your receptacles "powder coating" / baked-on? Can you tell me more about it?

Hi Don,

Here is your revised quote! Let me know when you overnight the check!

Thanks,

Brandon Steffanus
